FLUID

Fully Anonymous, Deflationary and Stable Ecosystem.

LITEPAPER VERSION 1.0

NOTE

This Litepaper does not contain cryptographical analysis. This will be available in Litepaper Version 1.1 which will be released early November 2020. You are free to take part in the project or not. It is your responsibility however to review the existing laws in your country before buying or joining this project. You must read, understand and accept the terms of this document before involving yourself in this project.

Since the introduction of bitcoin in 2009, the cryptocurrency market has continued to expand to new heights. Every week new blockchains, token, coins and exchanges enter the market. The crytopcurrency market is still in it's early stage of development. As of the time of writing, the cryptocurrency market is worth about 341.92 billion US dollars which is little compared to the normal stock market. As development in the cryptocurrency space continues to advance, the rise in decentralized applications are growing and the more the adoption of crypo.

The sole aim of $FLUID Finance is to create a fully anonymous and autonomous coin and eventually payment system with a trustless governance structure while providing high liquidity of assets. How will we do that? We have crafted a unique blend of techniques, some redundant, all vetted. We believe this will offer the most complete anonymity and autonomous package in any Protocol to date. Utilizing various successful features of competing protocols, we hope to implement a Dual-token and fully autonomous system with mandatory privacy while also removing the "trust issue" of completely private networks. What is meant by anonymous? Bitcoin is not anonymous, the blockchain is fully public and visible to anyone. This data is easily tracked and used by unscrupulous actors. This makes Bitcoin trustless, i.e. you do not need to "trust" any bitcoin node operator, you can verify the chain status with third party means. This is one of the ways Bitcoin network secures network health, at the cost of complete monetary exposure. With FLUID PROTOCOL, this is reverse.

PROTOCOL FEATURES

- High liquidity: lack of liquidity is a long standing issue in the Cryptocurrency trading market, this has made many investors and arbitrageurs to stay away from the crypto market.

- Dual-token Economy: $FLUID and $FLUIDGold token are FLUID PROTOCOL utility tokens utilizing the ER20 standard, $FLUID act as the primary fungible token for processing of transaction while FLUIDGold token acts as a staking reward for $FLUID.

- Low supply: initial supply of 20,000 token.

- Cross chain capabilities: $FLUID supports cross-chain capabilities and is deliberately built in a way that allows new block chains to integrate in to the system in the future.

- Reward for hodling: Designed to reward it users with 4% of the user's holdings per annum. The distribution will be done automatically 2% for every 182days. Meaning for every 182days you hodl $FLUID in **FLUID WALLET** you receive 2% increase in the number of tokens held.

FREQUENTLY ASKED QUESTIONS

1. QUESTION: when will wallet be released?
$FLUID wallet will be lauched 30 days after token launch

2. Do I need an account/ KYC to purchase $FLUID during OTC?
No. All you need is an ER20 compatible wallet like MetaMask, MyEtherWallet, Trust Wallet e.t.c.

3. How do I earn FLUIDGold token?
Fluidgold token can only be earned by staking $FLUID. FLUIDGold token acts as a staking reward.

4. How is FLUIDGold price determined?
FluidGold price is always 30% less the current price of $FLUID. The price of $FluidGold increases in relation to $FLUID

5. How do I earn stake my $FLUID?
FLUID protocol offers the easiest way to stake and earn significant rewards. $FLUID token holders can freeze their tokens to earn FLUIDGold token every 48hours.

TOKENMETRICS

- **NAME:** FLUID

- **SYMBOL:** $FLUID

- **FIXED SUPPLY:** 50,000FLUID

- **INITIAL SUPPLY:** 20,000
